STAINLESS STEEL BOTTLE

DOUBLE WALL VACUUM INSULATION

Specifically designed to keep your beverage the right temperature for a very long time.

Whether it's for hot coffee on those freezing mornings to those sweltering hot days at the beach with ice water, you can expect this to keep liquid piping hot for hours or keep beverages with ice for most of the day. When sealed, hot liquids several hours or more hours and liquids with ice for a longer time the watersy bottle - This giant was made for those occasions where you need that huge amount of liquid for those events or trips whether its hot coffee for a group or iced water for the long hiking/climbing trip adventure somewhere, you can count on this to not only keep your liquid cold or hot, but to have enough liquid for the entire day.

STAINLESS STEEL

BOTTLE KEEPER & COOLER

Enjoy cleaner, more delicious beer or wine flavors by keeping them ice cold." There's nothing worse than heading out to enjoy a day outside with friends and family, popping open a cold beer, and having it get warm faster than you drink it because the weather is so hot. The screw-on cover can hold in cold temperatures to keep your beers or wine from watering down, getting warm, or tasting skunky.

Designed specifically for men and women who love getting outside and having a bit of fun, these durable and reusable beer or wine insulators hold your beer or wine tight without impacting drinkability. Letter yet, you can keep sipping it a fresh beer from the cooler and it will retain the cold freshness even while you're playing corn hole, disc golf, throwing horseshoes, enjoying a dip in the ocean, fishing out on the lake, and so much more.

Process Introduction

COATING

Polishing

Polishing is aimed at obtaining a smooth surface or a specular gloss. When polishing, the high-speed rotating polishing wheel (circumferential speed of 20 m / sec or more) is pressed on the workpiece to cause the abrasive rolling and micro-cutting on the surface of the workpiece, thereby obtaining the bright Machined surface

Spray paint

A method of applying a uniform and fine mist droplet to a surface of an object to be coated by means of air pressure by means of a spray gun ,Low cost and environmentally friendly paint

Powder coating

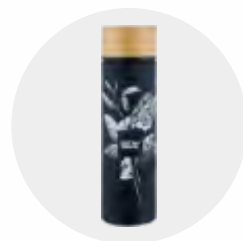

The coating powder does not need thin materials.construction environmental protection, non-toxic to humanbody,Excellent coatina apearance. strona adhesion, high mechanical strength, spraying curing time is short;Coating corrosion - resistant. wear - resistant.,environmental protection, non - toxic

Electroplate

The electroplating process is a method of laying a layer of metal on the conductor by the principle ofelectrolysis, which can enhance the corrosion resistance of the metal (the corrosion-resistant metal is mainlyused for the electroplating metal),increase the hardness,prevent the abrasion,improve the conductivity, thesmoothness and the resistance. Heat and beautiful appearance

ETC...

Logo

Silk screen

Screen printing is not limited by the Size and shape of the substrate. The ink layer has strona covering powerand is suitable for various types of ink. It is convenient to plate,cheap price and low cost.Generally only 1-3colors can be printed

Emboss

Emboss must have corresponding molds, the high cost,pattern and product are integrated,will not fallof,can improve product gradeThe color of the logo is the same as the color of the cup

Heat transfer printing

The transfer process transfers the fine pattern on the transfer film to the surface of the product through one treatment(heating and pressurization) by the heat transfer machine. After forming, the ink layer is combined with the surface of the product, which is realistic and beautiful, greatly improves the grade of the product,low production cost, strong hiding power, strong adhesion, conforms to the green printing standard,and no pollution.

Laser logo

Laser engraving process is based on CNC technology, safe and reliable: non-contact processing,precise and meticulous: processing accuracy can reach 0.02mm, saving environmental protection: small beam and spot diameter,consistent with the batch effect, high speed,low cost: not Limited by the number of processing

Sublimation

Sublimation is mainly to heat the pigment molecules into the medium. The color is vivid and the layers are distinct. The sublimation technology is a printing technology that truly achieves photo quality. It is waterproof, UV-resistant and anti-fingerprint than other printing technologies. Have a greater advantage in performance and higher cost

Water sticker

The water sticker is actually a brand-new transfer technology.It is applied to the surface of any curved and curved surface. The pattern and color are vivid and vivid,which greatly increases the added value of theproduct.

3D printing

The pattern is printed on the product through a 3D printer,the color is bright, the pattern has a concave andconvex shape, and the complicated graphic can be operated

Gas dye printing

Gas dye printing is a consumable for printing on a special layer of paper (flower bud) for gas dyeing with special gas-dyeing ink. Any complicated pattern can be transferred, there will be 360-degree seam, high cost,clear pattern

Water transfer printing

Water transfer is a kind of printina that uses water as a dissolving medium to transfer colored pattern transfer paperfilm onto the product and transfer any natural lines,photographs and images onto the product.The limitation is that it The transfer image is easily deformed, which is related to the shape of the product.and also related to the nature of the water transfer film itself. The higher the price, the more complicated theprocess

etc.....
